

**Bachelor Of Engineering In Information Technology**  
**2<sup>nd</sup> Year 2<sup>nd</sup> Semester, Semester Examination, 2023**  
**Subject Name –Graph Theory & Combinatorics (IT/PC/B/T/224)**

Full Marks=100

CO1  
[10]

**Q1.** (i) Find the adjacency matrix of the graph given below. Find out the number of paths of length 2 from one vertex to others.

(ii) Find out the maximum and minimum number of edges in a 3-component graph having 10 vertices.  
 [5+5=10]

CO2  
[20]

**Q2.** (i) Does a Hamiltonian path or circuit exist on the graph below (Figure: 1)? Justify it.  
 (ii) Prove with a suitable example "Every tree has either one or two centers".  
 (iii) Using Prim's algorithm find the minimal spanning tree of the graph given below (Figure: 2).

Figure: 1

Figure: 2

The vertex connectivity of a graph G refers to the minimum number of vertices that need to be removed in order to disconnect the graph. The edge connectivity of a graph G, on the other hand, refers to the minimum number of edges that need to be removed in order to disconnect the graph. [6+6+8=20]

CO3  
[20]

**Q3.** (i) Does a cut point and cut edges exist of the graph given below (Figure: 3)? If yes then mention them.

(ii) Find the union of the two graphs  $G_1$  and  $G_2$  given below (Figure: 4).

**(iii)** Justify this using a suitable example "The vertex connectivity of any graph G can never exceed the edge connectivity of G".

Example - Consider a complete graph with 4 vertices (denoted as  $K_4$ ). The vertex connectivity of  $K_4$  is 3, as removing any 3 vertices will disconnect the graph. The edge connectivity of  $K_4$  is also 3, as removing any 3 edges will disconnect the graph. In this example, the vertex connectivity is equal to the edge connectivity.

Figure: 3

 $G_1$  $G_2$ 

Figure: 4

[7+7+6=20]

CO4  
[20]

**Q4.** (i) "A graph is 2-colorable if it is bipartite and every cycle has an even length." Justify this with a suitable example.

(ii) If a graph has 100 vertices and 300 edges, can it be planar?

(iii) Find the chromatic number of the graph given below (Figure: 5). (Mention all steps properly)

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|             | <p>(iv) Find out how many vertices can be matched using maximum matching in the bipartite graph algorithm of the following graph given below (Figure: 6)? Can we call it perfect matching? Justify this.</p> <div style="display: flex; justify-content: space-around; align-items: center;">   </div> <div style="display: flex; justify-content: space-between; margin-top: 10px;"> <span>Figure: 5</span> <span>Figure: 6</span> <span>[6+3+4+(4+3)=20]</span> </div>                                                                      |
| CO5<br>[20] | <p>Q5. (i) How many cards must be selected from a standard deck of 52 cards to guarantee that at least three hearts are selected?? <math>8*2+1</math></p> <p>(ii) How many ways are there for <b>eight men</b> and <b>five women</b> to stand in a line so that <b>no two women</b> stand next to each other? <math>8! \times 9c5 \times 5!</math></p> <p>(iii) Suppose a club has 25 members. How many ways are there to choose a <b>president</b>, <b>vice-president</b>, <b>secretary</b>, and <b>treasurer</b> of the club, where no person can hold more than one office?</p> <p style="text-align: right;"><math>25 \times 24 \times 23 \times 22</math> <span style="float: right;">[6+7+7=20]</span></p> |
| CO6<br>[10] | <p>Q6.(i) Find the generating functions of the following sequences given below in closed form .</p> <p style="text-align: center;"><math>0, 1, -\frac{1}{2}, \frac{1}{3}, -\frac{1}{4}, \dots</math></p> <p>(ii) Using generating functions, find <math>a_n</math> in terms of <math>n</math> for the case given below:</p> <p style="text-align: center;"><math>a_0 = 1, a_1 = 2</math> and <math>a_{n+2} = 5a_{n+1} - 4a_n</math> for <math>n \geq 0</math></p> <p style="text-align: right;">[5+5=10]</p>                                                                                                                                                                                                     |

**CO1:** Explain and discuss the concept of different types of Graphs with fundamental properties and express different types of matrix representation. (K2)

**CO2:** Illustrate different types of trees such as (i) rooted tree (ii) spanning tree etc, and explain their properties. (K3)

**CO3:** Apply operations like Union, Deletion, and decomposition of graphs and illustrate Cut vertex and Cut edge and their properties. (K3)

**CO4:** Illustrate planar graph and their properties and Graph Coloring and Matching. (K3)

**CO5:** Apply and evaluate basic counting rules, pigeon-hole principle and principle of inclusion-exclusion. (K3)

**CO6:** Apply and Solve problems using Generating Function and Recurrence Relations. (K3)
